**Subject:** October FIFRA SAP meeting

Dear Mr. Knott:

Presumably EPA staff have identified the attached paper from PubMed, but in case it has slipped through the cracks (it was just published online on August 22), I wanted to forward it to you in order to assure that it will be considered at the October SAP meeting. The paper demonstrates that the deliberations of the IARC Monograph 112 Working Group on glyphosate were seriously flawed, particularly with regard to the rodent carcinogenicity studies, and that even a conclusion that glyphosate is a possible carcinogen would not be scientifically justified by a correct interpretation of the studies considered by the Working Group.

Sincerely,

Bob Tarone
